

the 1990s, the number of people in the United States who are obese has increased by 50% (Flegal et al. 2002). In the United Kingdom, the prevalence of obesity has increased from 10% in 1980 to 15% in 1997 (Pickett and Whitehead 1995). In the United States, the prevalence of obesity has increased from 15% in 1980 to 23% in 1994 (Flegal et al. 2002). In the United Kingdom, the prevalence of obesity has increased from 10% in 1980 to 15% in 1997 (Pickett and Whitehead 1995).

Obesity is a major public health problem because it is a risk factor for many chronic diseases, including heart disease, diabetes, and certain types of cancer. Obesity is also a leading cause of disability and premature death. In the United States, obesity is the leading cause of disability and premature death (Flegal et al. 2002).

Obesity is a complex condition that is caused by a combination of factors, including genetics, environment, and lifestyle. Obesity is a complex condition that is caused by a combination of factors, including genetics, environment, and lifestyle. Obesity is a complex condition that is caused by a combination of factors, including genetics, environment, and lifestyle.

Obesity is a complex condition that is caused by a combination of factors, including genetics, environment, and lifestyle. Obesity is a complex condition that is caused by a combination of factors, including genetics, environment, and lifestyle. Obesity is a complex condition that is caused by a combination of factors, including genetics, environment, and lifestyle.

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million.

There are a number of reasons why the world is not doing better in terms of food security. One of the main reasons is that the world's population is growing very rapidly. In 1990, the world population was 5.3 billion. By 2000, it had increased to 6.1 billion. By 2010, it is expected to reach 6.9 billion. This means that there are more people in the world than ever before, and this puts a huge strain on the world's food resources.

Another reason why the world is not doing better in terms of food security is that the world's food production is not keeping pace with the world's population growth. In 1990, the world produced 2.1 billion tonnes of food. By 2000, it had increased to 2.4 billion tonnes. By 2010, it is expected to reach 2.7 billion tonnes. This means that the world is producing more food than ever before, but the increase is not keeping pace with the increase in the world's population.

A third reason why the world is not doing better in terms of food security is that the world's food resources are being used in a very inefficient way. In 1990, the world used 1.1 billion tonnes of food. By 2000, it had increased to 1.4 billion tonnes. By 2010, it is expected to reach 1.7 billion tonnes. This means that the world is using more food than ever before, but the increase is not keeping pace with the increase in the world's population.

There are a number of things that can be done to improve the world's food security. One of the most important things is to increase the world's food production. This can be done by increasing the amount of land that is used for food production, by increasing the amount of water that is used for food production, and by increasing the amount of fertilizer that is used for food production.

Another important thing that can be done to improve the world's food security is to improve the way that the world's food resources are used. This can be done by reducing the amount of food that is wasted, by increasing the amount of food that is used for food production, and by increasing the amount of food that is used for food production.

There are a number of other things that can be done to improve the world's food security. These include increasing the world's food resources, increasing the world's food production, and increasing the world's food security.

The world's food security is a very important issue, and it is one that needs to be addressed as soon as possible. If we do not take action now, the world's food security will be in jeopardy in the future.

There are a number of things that can be done to improve the world's food security. These include increasing the world's food resources, increasing the world's food production, and increasing the world's food security.

the 1990s, the number of people with a mental health problem has increased by 50% (Mental Health Foundation, 2000). The prevalence of mental health problems has increased in the general population, and the incidence of mental health problems has increased in the prison population (Mental Health Foundation, 2000).

There is a growing awareness of the need to address the mental health needs of prisoners. The Department of Health (2000) has published a strategy for mental health services, which includes a commitment to improve the mental health of prisoners. The Department of Health (2000) has also published a strategy for mental health services, which includes a commitment to improve the mental health of prisoners.

The Department of Health (2000) has published a strategy for mental health services, which includes a commitment to improve the mental health of prisoners. The Department of Health (2000) has also published a strategy for mental health services, which includes a commitment to improve the mental health of prisoners.

The Department of Health (2000) has also published a strategy for mental health services, which includes a commitment to improve the mental health of prisoners.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995. The public sector has also become an important employer of women, with 50% of public sector employees being women in 1995, compared with 40% in 1980.

There are a number of reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work. Another reason is that the public sector has a high proportion of jobs that are part-time or flexible, which are more likely to be held by women.

There are also a number of reasons why the public sector has become an important employer of women in the 1990s. One reason is that the public sector has a high proportion of jobs that are in the health and social care sectors, which are traditionally held by women. Another reason is that the public sector has a high proportion of jobs that are in the education sector, which is also traditionally held by women.

There are also a number of reasons why the public sector has become an important employer of women in the 1990s. One reason is that the public sector has a high proportion of jobs that are in the health and social care sectors, which are traditionally held by women. Another reason is that the public sector has a high proportion of jobs that are in the education sector, which is also traditionally held by women.

There are also a number of reasons why the public sector has become an important employer of women in the 1990s. One reason is that the public sector has a high proportion of jobs that are in the health and social care sectors, which are traditionally held by women. Another reason is that the public sector has a high proportion of jobs that are in the education sector, which is also traditionally held by women.

There are also a number of reasons why the public sector has become an important employer of women in the 1990s. One reason is that the public sector has a high proportion of jobs that are in the health and social care sectors, which are traditionally held by women. Another reason is that the public sector has a high proportion of jobs that are in the education sector, which is also traditionally held by women.

There are also a number of reasons why the public sector has become an important employer of women in the 1990s. There are also a number of reasons why the public sector has become an important employer of women in the 1990s. One reason is that the public sector has a high proportion of jobs that are in the health and social care sectors, which are traditionally held by women. Another reason is that the public sector has a high proportion of jobs that are in the education sector, which is also traditionally held by women.

There are also a number of reasons why the public sector has become an important employer of women in the 1990s. One reason is that the public sector has a high proportion of jobs that are in the health and social care sectors, which are traditionally held by women. Another reason is that the public sector has a high proportion of jobs that are in the education sector, which is also traditionally held by women.

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million.

There are a number of reasons why the world's population is still hungry. First, the world's population is growing very fast. The world population is expected to reach 8 billion by the year 2025, and this will mean that there will be more mouths to feed. Second, the world's food production is not increasing fast enough to keep up with the growing population. This is because of a number of factors, including the fact that the world's agricultural land is being used less and less efficiently, and the fact that the world's water resources are being used less and less efficiently.

Third, the world's food production is not distributed evenly. Some countries have a surplus of food, while others have a shortage. This is because of a number of factors, including the fact that some countries have a better climate for growing food than others, and the fact that some countries have more land than others. Fourth, the world's food production is not distributed evenly.

Some countries have a better climate for growing food than others, and some countries have more land than others. This is because of a number of factors, including the fact that some countries have a better climate for growing food than others, and the fact that some countries have more land than others. This is because of a number of factors, including the fact that some countries have a better climate for growing food than others, and the fact that some countries have more land than others.

This is because of a number of factors, including the fact that some countries have a better climate for growing food than others, and the fact that some countries have more land than others. This is because of a number of factors, including the fact that some countries have a better climate for growing food than others, and the fact that some countries have more land than others.

This is because of a number of factors, including the fact that some countries have a better climate for growing food than others, and the fact that some countries have more land than others.
